

As per 1 November 2014, we will start using a new moisture measurement method at incoming goods inspection in our plant in Dunaujvaros. The measurement will be taken as you pass through the moisture measurement frame at the scale.

It is important for you to know the following and adhere to it:

- 1) Precise measurements require the side panels on your trailers are metal-free. This means that with the sometimes used side panels made from aluminium, no measurement can be taken. Therefore, these must be removed by you prior to passing through the gate.
- 2) The moisture measurement frame must be passed at a maximum speed of 5 km/h.
- 3) The measurement process is started manually by our employees and stops automatically.
- 4) Your lorry's tarpaulin must be opened before driving through.

Instructions made by our personnel are to be adhered to!
